FOR IMMEDIATE RELEASE

Acuo Technologies Announces Enhanced Offerings that Facilitate Management of Non-DICOM Objects

BLOOMINGTON, MN, March 1, 2010 – Acuo Technologies, developers of high-performance medical image management software, data migration tools and services, today announced enhanced product offerings that facilitate management of non-DICOM objects.

Acuo's DICOM Services Grid™, the industry leading Vendor/PACS Neutral Archive provider, is an enterprise-wide collaborative asset management solution. The DICOM Services Grid solution is built upon a distributed asset management foundation – AcuoStore®. The AcuoStore Digital Asset Manager is a robust digital asset management service that lets applications store, track, and retrieve virtually any type of digital asset managed by an AcuoStore archive. Functioning like a digital vault for the client application, AcuoStore checks digital assets into and out of storage archives that have been configured to store digital assets. AcuoStore itself features a set of interfaces, including web services, that allow an administrator to set up applications to manage, secure, and easily expand storage archives on virtually any storage device, including next generation devices such as CAS and object based storage solutions.

Acuo is pleased to announce continued innovation of the DICOM Services Grid solution through enhancements to AcuoStore facilitating the integration of all other associated Non-DICOM Clinical Content. The DICOM Services Grid now offers the industry's most comprehensive mechanisms for management of Non-DICOM objects including DICOM encapsulation, XDS Repository Support, and additional Web Services for native bulk asset management or content that is integrated to the DICOM information model.

“Acuo is pleased to offer our customers continued innovation of the DICOM Services Grid enabling a single point of access for storing and management of all clinical content. Our solutions are designed to provide our customers with a mechanism to consolidate DICOM and non-DICOM objects into a collaborative and extensible enterprise asset management architecture,” said Shannon Werb, COO and

CTO of Acuo Technologies.

About Acuo Technologies

Acuo Technologies, with headquarters in Bloomington, MN, was founded in 2000, and is a market leader in the development of high-performance software for intelligent medical image management, data migration tools and services. The Company's DICOM Services Grid™ is an enabling open systems software solution to house digital medical imaging content for any healthcare enterprise. Over 475 system implementations around the world have deployed AcuoMed® and AcuoStore® software solutions. For more information, visit www.acuotech.com.

DICOM is the registered trademark of the National Electrical Manufacturers Association for its standards publications relating to digital communications of medical information.
